DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-26 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 6-171236 (JP '236) [cited by Applicant in the IDS filed 5/22/01]. JP '236 discloses an optical recording medium comprising a recording layer **3** laminated on the upper surface of a substrate **1** through a heat-resistant protective layer **2**. The recording layer is formed from an Al or Au layer **3-2** (i.e. corresponding to the reflecting layer of the present invention) and a Ge layer **3-1** (i.e. corresponding to the transparent layer of the present invention), wherein at the time of recording the Al/Au and Ge layers are mutually thermally diffused to generate a large reflectivity difference. See the abstract and Figure 1. Therefore, this invention is not novel.

2. Claims 1-7, 9-10, 12, 14-21 and 23-26 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 4,587,533 to Nakane et al. (Nakane). Nakane discloses and information recording medium comprising a substrate and a recording layer composed of at least two layers, the first layer (i.e. corresponding to the transparent layer of the present invention) formed over the substrate and the second layer (i.e. corresponding to the reflecting layer of the present invention) formed over the

first layer. The substrate and the first layer have the property of high transmittance to laser beams and the second layer is composed of a metal capable of absorbing the laser beams and readily forming an alloy with the material of the first layer, thereby changing the conditions for multiple reflections and changing the reflectance in the recording layer as viewed from the substrate. See the abstract and column 6, lines 63-67. Furthermore, the exemplified metals for the second layer include In. See column 4, lines 63 to column 5, line 1. Therefore, this invention is not novel.
